

Warning Label Application Instructions

We strongly suggest watching the more detailed video demonstration linked to Model WL-100 on our website. www.norberts.net

The WL-100 Warning Label Application Kit includes 20 water activated warning labels, one applicator squeegee and this instruction sheet. You will also need a bucket of water large enough to submerge the water activated label and a small clean towel.

- 1.) Choose where you want to apply the warning label and wipe the area clean with a dry towel.
- 2.) Remove the label backing, hold just the **EDGE** of the label and submerge the label in water for one second. **IMMEDIATELY** press the label into position on the vinyl surface and **GENTLY** press into place. **NEVER** attempt to reposition or slide the label as it will begin to stick immediately.
- 3.) Place a finger on one end of the label and use the squeegee to wipe from the **CENTER** of the label away from your finger. Place finger on opposite side and wipe squeegee in opposite direction. Repeat one more time to ensure all surfaces of label adhere to vinyl. **SEE EXAMPLE A**
- 4.) Gently peel off label facing and using the dry clean towel gently wipe from the center of the label out in each direction. **SEE EXAMPLE B**
